## New features in the ISP system

A summary on new functions and system updates being deployment on the morning of **Tuesday October 23 2018**. Please contact [isp.support@education.lu.se](mailto:isp.support@education.lu.se) if you have questions about the new features.

### *Increased text field size for 'Forms of supervision/Plan for supervision' in tab 5*

The text input field has been increased in size and expandable for better overview and readability.

### *Insertion of course code and level entry fields for 'Planned courses'*

Going forward it will be possible to add course codes (if known) as well as degree of level (first, second or third cycle) to planned courses. The new entry fields are optional.

### *Adding of subject code to the subject description on the PDF version of the study plan*

Going forward this code will also be visible along with the subject in the PDF version of the study plan.

### *Automatic updates of Ladok data when doctoral students edit the study plan*

When doctoral students click the 'edit' button to open the study pan, the ISP system will automatically check for new data from Ladok (completed or credited courses etc.). A pop up window informs the doctoral students which areas have been updated, or if there were no new updates to collect.
