Seminar: the Role of Educators in Supporting Students Metacognition of Interdisciplinary Learning

Steven Curtis and Sofie Sandin
Institute for Industrial Environmental Economics (IIIEE), Lund University

As a preparation for the seminar, we produced a podcast episode as part of the IIIEE Podcast 'Advancing Sustainable Solutions'. The title of the podcast is "Joining Forces for Sustainability: The value of interdisciplinary education".

You can access the podcast on any major podcast platform including:

- ApplePodcasts: https://apple.co/2mvVnCZ
- Spotify: https://spoti.fi/2WauBxe
- SoundCloud: https://bit.ly/2m95zAM

We pose several questions in the episode, which we wish to pick up in the seminar. Therefore, we ask participants to reflect on the following to discuss in our prepared seminar. We will collect thoughts and follow up with a synthesis to be sent to participants, if they choose.

- How do we see our role in supporting interdisciplinary education?
- How can we make the most of interdisciplinary programmes, courses, teaching staff and students to realise interdisciplinary learning?
- What is our role to support students in seeing the value of their education?
- What specific examples of teaching and learning activities do we think contribute to interdisciplinary learning? (Considering the five features of interdisciplinary education - communication, critical awareness, disciplinary grounding, integration and teamwork)

Please note that the seminar will be recorded.
